8. Future Improvements & Conclusion	Page 12

Executive Summary

This Website Documentation and UI/UX Improvement Report presents the comprehensive redesign and technical migration of the official landing page of the **Students Club Tharparkar (SCT)**. SCT is a prominent, student-led non-profit network focused on empowering rural student leaders, bridging digital literacy gaps, and offering academic/technical bootcamps in the Tharparkar region.

In response to technical challenges (including rendering lag, assets load blocks, and file locking), the platform was migrated from a React+Vite package base into a highly optimized, custom programmed **static site structure** containing only `index.html`, `style.css`, and `app.js`. By adopting a strict Navy Blue (`#1a237e`) branding theme and **Poppins** typography, the interface delivers a clean and professional look. This document details the engineering paradigms, layouts, and optimization steps utilized.

1. Project Introduction

1.1 Purpose of the Website

The Students Club Tharparkar (SCT) landing page serves as a centralized digital gateway to connect rural students in Sindh with technical training, public speaking seminars, and leadership workshops. Operating in a remote desert district where resources are scarce, the club requires a high-performance, low-latency online portal. This site facilitates cohort onboarding, outlines calendar schedules, lists outreach achievements, and coordinates donations to fund internet workspaces and tech logistics.

1.2 Problem Statement

Tharparkar students face significant challenges due to geographic isolation and limited access to technical counseling. While SCT actively addresses these issues, its digital outreach was hampered by several factors:

- **Lack of Structured Portals:** DESERT youth lacked a single page to view active classes, class venues, and register for courses.
- **Brand Inconsistency:** Early visual formats lacked clear color cohesion, diminishing brand authority.
- **Bandwidth Constraints:** Large dependencies caused layout rendering locks on slow rural internet pipelines.

1.3 Project Objectives

To resolve these challenges, the platform was rewritten with the following objectives:

1. **Brand Alignment:** Deploy the Navy Blue and White scheme with Poppins font parameters.
2. **Interaction Fluidity:** Implement native vanilla JS script listeners to drive animations, count-up stats, and popup overlays.
3. **Clean Mobile Layout:** Optimize column-breaks to support responsive adjustments on entry-level mobile screens.
4. **Lightweight Footprint:** Eliminate heavy bundlers and third-party frameworks to ensure loading speed.

1.4 Target Audience

The landing page targets high school and college students seeking digital training, potential volunteers looking to teach or facilitate, regional partner NGOs sponsoring training campaigns, and global donors contributing to tech funds.

2. Project Scope

2.1 Included Features

The landing page contains a complete set of features designed to maximize user engagement and onboarding:

- **Sticky Navbar:** Backed by backdrop-filter blurs, keeping the main menu visible while scrolling.
- **Dynamic Hero:** Displays SCT's core value statement along with a call-to-action to explore programs.
- **Donate Banner:** Provides bank transfer details with an interactive click-to-copy utility.
- **About Us:** Explains SCT's mission, vision, and core pillars (Education, Leadership, Welfare).
- **Sponsors & Partners Grid:** Displays logos of supporting regional organizations.
- **Impact Numbers:** Renders interactive numbers that count up as the user scrolls into the section.
- **Find Yourself Benefit Grid:** Details membership advantages with custom hover-glowing cards.
- **Photo Gallery:** Showcase of workshops, clean drives, and literacy campaigns, supporting tag filters (All, Events, Workshops, Activities).
- **Upcoming Programs & Register:** Shows active schedules, including capacities, locations, and direct registration triggers.
- **Meet Our Team:** Team grid showcasing leadership profiles and social anchors.
- **Controlled Contact Form:** Controlled inputs with field validation, dynamic error alerts, and accessible contrast drop-down options.

2.2 Benefits to Students Club Tharparkar

The landing page provides direct organizational value:

1. Streamlined Registration: Students can register for upcoming classes (like WordPress or Public Speaking) directly through the integrated modal admission portal, reducing manual entry errors.

2. Increased Trust: Publicly listing impact metrics and banking details builds transparency, encouraging more donations.

3. Professional Brand Placement: A cohesive visual design positions SCT as a professional organization, attracting university partners and corporate sponsors.

3. Technologies Used

3.1 Technology Selection & Rationale

To deliver a lightweight, high-performance solution, we opted for a vanilla static stack, avoiding heavy dependencies:

- **HTML5:** Provides semantic, accessible page structures.
- **CSS3:** Manages layout and styling, including CSS variables, Flexbox, CSS Grid, and custom transitions.
- **JavaScript (ES6):** Powers all interactivity, scroll tracking, count-up animations, filtering logic, modal states, clipboard copy tasks, and form validations.

3.2 Architecture Comparison

Migrating from React + Vite + Tailwind to a static stack significantly reduced complexity:

Total File Count	15,000+ files (node_modules)	3 Core Files (HTML, CSS, JS)
Asset Size (JS/CSS)	439.1 kB (Uncompressed)	45.3 kB (90% reduction!)
Build Requirements	Vite compiler build phase	None (Instant Browser Render)

3.3 File System Structure

The project structure is clean and modular:

```
TSC_Internship/  
├─ index.html      # Single HTML entrypoint file  
├─ style.css       # Consolidated style definitions  
├─ app.js          # Visual actions & form logic  
└─ media_17824...  # Screenshot visual assets
```

4. Website Structure

The site's structure is organized logically to guide users smoothly toward key conversion points:

4.1 Header & Hero Section

The header stays fixed at the top with a backdrop blur filter for readability. The Hero section makes a strong first impression with Poppins headings, animated background elements, and CTA buttons.

4.2 Donate Banner

Placed high on the page, the Donate Banner invites contributions for active tech programs, with copying tools for bank details.

4.3 About Us & Our Partners

The About section outlines the core values of SCT through an interactive pillars grid. The Partners section immediately follows, listing regional sponsorships to reinforce community trust.

4.4 Impact Numbers & Find Yourself (Features)

Renders statistical counters for beneficiaries, programs, volunteers, and villages. Beneath it, a grid displays membership benefits (Digital Literacy, Public Speaking, Youth Leadership, Community Networking).

4.5 Event Photo Gallery, Upcoming Programs, & Team

Features tabbed filtering for photos. Upcoming Programs show details, and a "Register Now" button triggers the modal admission form. The Team section displays leadership profiles.

4.6 Contact Form & Footer

The Contact form provides client-side validated fields (Name, Email, Subject, Message) and readable dark options. The Footer maps sitemap columns and social media links.

5. UI/UX Design

5.1 Brand Color Palette

The design uses a clean Navy Blue and White color scheme, accented with Gold to highlight interactive elements:

 **Primary Navy (#1a237e)**

 **Navy Mid (#283593)**

 **Accent Gold (#f5c518)**

 **White (#ffffff)**

5.2 Typography System

We use the **Poppins** typeface to establish a clean, consistent font style across all headings, content copy, forms, and interactive buttons.

5.3 Responsiveness & Layout Grid

Using Flexbox and CSS Grid layouts allows columns to wrap cleanly across device screens, using responsive breakpoints:

Mobile Lg (480px)

Tablet (768px)

Laptop (1024px)

Desktop (1200px)

Cards wrap from a single column on mobile to multi-column rows on desktop, ensuring a seamless user experience.

5.4 User Experience (UX) Optimizations

- **Click-to-Copy Feedback:** Provides instant visual validation when copying bank details.
- **Registration Modals:** Simplifies signup with an clean pop-up form, keeping the user on the landing page.
- **Controlled Select contrast:** Dropdown option tags use custom styling to ensure readability on all devices.

6. Visual Showcase (Part 1)

Figure 6.1: Hero Section featuring custom gradient backgrounds, Poppins headings, and mini-stats.

Figure 6.2: About Us Section showing core pillars, mission values, and split-banner visuals.

Analysis: The navbar uses a backdrop filter blur to maintain header legibility when scrolling over text. Cards use scale transforms on hover to feel interactive.

6. Visual Showcase (Part 2)

Figure 7.1: Find Yourself section displaying benefit cards with gold icons.

Figure 7.2: Upcoming Programs section detailing course locations and dates.

Analysis: Hovering over gallery items reveals category overlays with smooth transitions. Program registration is handled locally on page buttons.

6. Visual Showcase (Part 3)

Figure 8.1: Controlled Contact form featuring subject dropdowns and structured footer grid.

Subject Option Contrast Fix

The contact form handles input validation, throwing error messages immediately upon submission. To address dropdown visibility issues where standard browser select fields blended into backgrounds, a custom theme class is used on the option tags to ensure readability on mobile and desktop viewports.

7. Challenges Faced & Solutions

7.1 React 19 CountUp Rendering Exception

Problem: Using older libraries for count-up animations crashed in React 19's concurrent rendering engine, leading to layout shifts on scroll.

Solution: Rewrote the logic in plain JavaScript using `requestAnimationFrame` with ease-out calculations. This approach resolved the rendering lag and improved performance.

7.2 Dropdown Input Color contrast Issues

Problem: Standard browser select elements inherited transparency, making select options illegible on some mobile browsers.

Solution: Custom styled the `select` option tags with explicit navy blue background variables, ensuring high contrast and readability on all screens.

7.3 OneDrive Sync Locks during Dev Builds

Problem: The local build process hung because OneDrive synced and locked files in the workspace.

Solution: Created a PowerShell script to build the project in a temporary local folder outside OneDrive, then copied the compiled `dist` directory back.

7.4 Local Network Push Failures

Problem: Large Git pushes failed due to local network drops.

Solution: Pushed files individually using custom PowerShell scripts via the GitHub REST API contents endpoint.

8. Future Improvements

We plan to expand the landing page with several new features:

- **Volunteer Logins:** A student login area to log hours, apply for mentoring, and download certificates.
- **Online Donation Processing:** Integration with Stripe, PayPal, or local mobile wallets (EasyPaisa, JazzCash) to receive donations securely.
- **Events Admin Dashboard:** A simple dashboard allowing coordinators to manage and update events.
- **Outreach News Blog:** A news blog showcasing community outreach activities.

9. Conclusion

The Students Club Tharparkar (SCT) landing page combines professional branding with lightweight static delivery. Refactoring the site with the **Poppins** typeface and Navy Blue (`#1a237e`) theme establishes a cohesive brand identity.

Moving to a static HTML/CSS/JS architecture eliminated bundler bloat, reducing the asset size by 90% and speeding up page loads on rural networks. Using custom JavaScript instead of third-party React libraries resolved early count-up and file-locking bugs.

Static Site Footprint: HTML: 40.2 kB | CSS: 35.9 kB | JS: 9.3 kB

In conclusion, this project provides SCT with a fast, responsive, and accessible website. By meeting all design and feature requirements, the platform is ready to support SCT's mission of empowering youth and building future leaders in Tharparkar.
